

When it comes to
temporary protection...
we've got it covered.

Information Sheet

Recycling corrugated plastic board

Collection Policy

Since 2008 Swiftec have been able to offer a recycling scheme for the recovery and re-use of corrugated plastic board for the screen-print industry. The scheme is applicable wherever corrugated plastic board is used as a substrate for direct screen-printing or digital printing or as a support for lamination of polypropylene based printing material.

The scheme relies on the following

1. Material to be relatively clean with no gross contaminants nor other materials (e.g. paper or PVC) mixed with it
2. Board to be palletised, strapped and filmed on pallets for double stacking on lorries.
3. Where necessary the client's own return lorries are used to centralise the boards in a single location for collection by Swiftec in six tonne loads

We can also collect and reprocess solid polypropylene board and competitor's board. Swiftec offer a quarterly collection service, the cost of which is usually covered by the resale value of the processed granules.

Where the boards are clean and entirely free of contaminants the processed granules can be used in the production of rework corrugated plastic board. In the other case the granules are used for such applications as production of plastic pallets.
